

Catastrophic Hemorrhage

Record the time (24:00 format) when the tourniquet was applied: on the tourniquet and on the PCR.  
Tourniquet during Mass Casualty Incident: record the application of the tourniquet on the triage chart; if possible, the patient should be supervised by a witness (to prevent the tourniquet from being removed); depending on the circumstances (such as unconsciousness, no witness, etc.), note a distinguishing mark on the patient's forehead.
